

Farosmel Pizza

Farosmel Pizza is an ecommerce website for ordering and delivering pizza to UPSA based students. This ecommerce website is built using the Python Flask framework. Farosmel Pizza ecommerce website features the following;

- User register and log in system
- Admin page for adding/editing categories and products
- Pizza Menu page
- About Us page
- Contact Us page
- Terms and Condition page
- Dashboard for logged-in users
- Cart system for users
- Payment system for orders

E-commerce Model

- Farosmel Pizza uses a B2C (Business-to-Customer) model in operating our online pizza ordering system where the customers are the students of UPSA.
- Given the scope of our customer base, this is a regional e-commerce type which serves students on and around campus.
- Chanel of distribution will be via motorcycle delivery riders.
- This website is fully responsive for small and large screens
- Product is pizza in different sizes grouped by category
